John,

Per your request, attached is a CAD file that includes the limits of clearing. We have not included the base topographic mapping due to file size restrictions (it is my understanding that the topographic "surface" file is approximately 70MB). We have included the northing and easting for one point, this should allow you to confirm that Glover and GAI is using the same coordinate datum.

Let me know if you need anything else.

John

Could you please send a cad file so that we can stake the area out and take a look Monday after the road pre construction meeting?

Thanks

John Glover

John,

See the attached figure showing the Pond E Dredging tree clearing areas. The trees should be cleared prior to May 4, 2015. The purpose is to fell trees which may need to be cut for the Pond E Dredging, Placement of Ash in Pond D, and installation of a temporary treatment system for dewatering.

The area that is called out as "Contractor to Verify Trees are located within the Limits of Ash" is associated with a **potential** wetland area based on our draft wetland mapping, so we need to verify there is ash where the trees will be cut. Please let me know if you have any questions.

Based on the aerial, most of the areas called out don't actually have trees in them, so hopefully this won't involve too much cutting. If there are any other areas which need tree cutting in order to perform the dredging or clean closure of Pond E please let me know.

Thanks,

John Klamut

John,

Attached is a pdf of the Tree Clearing Plan for Possum Point.

Thanks
